Leve 1, Platinum Reserve Analysis Report Period – 01/01/18 – 12/31/18

Client Reference Number - \$\$\$\$
Property Type – Paired Homes

FINAL Version

Fiscal Year End – December 31

Number of units- 82

Date of Property Observation - September 19, 2017

Project Manager - G. Michael Kelsen, RS, PRA
Main Contact Person - DfcdYfmA UbU Yf

Report was prepared on - Tuesday, January 02, 2018

Introduction to the Reserve Analysis -

The elected officials of this association made a wise decision to invest in a Reserve Analysis to get a better understanding of the status of the Reserve funds. This Analysis will be a valuable tool to assist the Board of Directors in making the decision to which the dues are derived. Typically, the Reserve contribution makes up 15% - 40% of the association's total budget. Therefore, Reserves is considered to be a significant part of the overall monthly association payment.

Every association conducts its business within a budget. There are typically two main parts to this budget, Operating and Reserves. The Operating budget includes all expenses that are fixed on an annual basis. These would include management fees, maintenance fees, utilities, etc. The Reserves is primarily made up of Capital Replacement items such as asphalt, roofing, fencing, mechanical equipment, etc., that <u>do not</u> normally occur on an annual basis.

The Reserve Analysis is also broken down into two different parts, the Physical Analysis and the Financial Analysis. The Physical Analysis is information regarding the physical status and replacement cost of major common area components that the association is responsible to maintain. It is important to understand that while the Component Inventory will remain relatively "stable" from year to year, the Condition Assessment and Life/Valuation Estimates will most likely vary from year to year. You can find this information in the **Asset Inventory Section** (Section 2) of this Reserve Analysis. The **Financial Analysis Section** is the evaluation of the association's Reserve balance, income, and expenses. This is made up of a finding of the clients cur entry Reserve Fund Status (measured as Percent Funded) and a recommendation for an appropriate Reserve Allocation rate (also known as the Funding Plan). You can find this information in Section 3 (pages 1 – 13) of this Reserve Analysis.

The purpose of this Reserve Analysis is to provide and at a destinate as to what the Reserve Allocation needs to be. The detailed schedules we see as an advanced warning that major projects will need to be addressed in the future. This will allow the Board of Directors to have ample timing to obtain competitive estimates and bids that will result in cost savings to the individual homeowners. This will also ensure the physical well being of the property and ultimately enhance each over any first arm ent, while limiting the possibility of unexpected major projects that may lead to Sp. ci. La sessments.

It is important for the client, homeowners, and potential future homeowners to understand that the information contained in this analysis is based on estimates and assumptions gathered from various sources. Estimated life expectancies and cycles are based upon conditions that were readily visible and accessible at time of the observation. No destructive or intrusive methods (such as entering the walls to inspect the condition of electrical wiring, plumbing lines, and telephone wires) were performed. In addition, environmental hazards (such as lead paint, asbestos, radon, etc.), construction defects, and acts of nature have not been investigated in the preparation of this report. If problem areas were revealed, a reasonable effort has been made to include these items within the report. While every effort has been made to ensure accurate results, this report reflects the judgment of Aspen Reserve Specialties and should not be construed as a guarantee or assurance of predicting future events.

General Information and Answers to Frequently Asked Questions –

Why is it important to perform a Reserve Study?

As previously mentioned, the Reserve allocation makes up a significant portion of the total monthly dues. This report provides the essential information that is needed to guide the Board of Directors in establishing the budget in order to run the daily operations of your association. It is suggested that a third party professionally prepare a Reserve Study since there is no vested interest in the property. Also, a professional knows what to look for and how to properly develop an accurate and reliable component list.

Now that we have "it", what do we do with "it"?

Hopefully, you will not look at this report and think it is too cumbersome to understand. Our intention is to make this Reserve Analysis very easy to read and understand. Please take the time to review it carefully and make sure the "main ingredients" (asset information) are complete and accurate. If there are any inaccuracies, please inform us immediately so we may revise the report.

Once you feel the report is an accurate tool to work from, use it to help establish your budget for the upcoming fiscal year. The Reserve allocation makes up a significant portion of the total monthly dues and this report should help you determine the correct amount of money to no into the Reserve fund. Additionally, the Reserve Study should act as a guide to obtain propose is in advance of pending normal maintenance and replacement projects. This will give you are opportunity to shop around for the best price available.

The Reserve Study should be readily available for Real Esta at grants, broke age firms, and lending institutions for potential future homeowners from an or contained of Reserves becomes more of a household term, people are requesting from the sweet associations to reveal the strength of the Reserve fund prior to purchasing a condor injum or townhome.

How often do we update (it is view it"?

Unfort nately, the visia misconception that these reports are good for an extended period of time since the report has projections for the next 30 years. Just like any major line item in the budget, the Research Analysis should be reviewed *each year* <u>before</u> the budget is established. Invariably, some assumptions have to be made during the compilation of this analysis. Anticipated events may not materialize and unpredictable circumstances could occur. Aging rates and repair/replacement costs will vary from causes that are unforeseen. Earned interest rates may vary from year to year. These variations could alter the content of the Reserve Analysis. Therefore, this analysis should be reviewed annually, and a property observation should be conducted at least once every three years.

Is it the law to have a Reserve Study conducted?

The Government requires reserve analyses in approximately 20 states. The State of Colorado currently requires all associations to adopt a Reserve policy, but does not currently enforce a Reserve Study is completed. Despite enacting this current law, the chances are also very good the documents of the association require the association to have a Reserve fund established. This may not mean a Reserve Analysis is required, but how are you going to know there are enough funds in the account if you don't have the proper information? Hypothetically, some associations look at the Reserve fund and think \$50,000 is a lot of money and they are in good shape. What they don't know is the roof will need to be replaced within 5 years, and the cost of the roof is going to exceed \$75,000. So while \$50,000 sounds like a lot of money, in reality it won't even cover the cost of a roof, let alone all the other amenities the association is responsible to maintain.

What makes an asset a "Reserve" item versus an "Operating" item?

A "Reserve" asset is an item that is the responsibility of the association to maintain, has a limited Useful Life, predictable Remaining Useful Life expectancies, typically occurs on a cyclical basis that exceeds 1 year, and costs above a minimum threshold cost. An "operating" expense is typically a fixed expense that occurs on an annual basis. For instance, minor repairs to a roof for damage caused by high winds or other weather elements would be considered an "operating" expense. However, if the entire roof needs to be replaced because it has reached the end of its life expectancy, then the replacement would be considered a Reserve expense.

The GREY area of "maintenance" items that are often seen in a Reserve Study -

One of the most popular questions revolves around major "maintenance" items, such as painting the buildings or seal coating the asphalt. You may hear from your accountant that since painting or seal coating is not replacing a "capital" item, then it cannot be considered a Reserve issue. However, it is the opinion of several major Reserve Study providers that these items are considered to be major expenses that occur on a cyclical basis. Therefore, it makes it very difficult to ignore a major expense that meets the criteria to be considered a Reserve component. Once explained in this context, many accountants tend to agree and will include any expenses, such as these examples, as a Reserve component.

The Property Observation -

The Property Observation was conducted following a review of the documents of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspecting the proof of the documents was reviewed prior to inspect of the documents was reviewed by the doc

Estimated life expectancies and life syc is are based upon conditions that were readily accessible and visible at the time of the observation. We did not destroy any landscape work, building the observation of intrusive investigation during the observation. In these cases information much have the obtained by contacting the contractor or vendor that has worked on the property.

The Reserve Fund Analysis -

We projected the starting balance from taking the most recent balance statement, adding expected Reserve contributions for the rest of the year, and subtracting any pending projects for the rest of the year. We compared this number to the ideal Reserve Balance and arrived at the Percent funded level. Measures of strength are as follows:

0% - 30% Funded – Is considered to be a "weak" financial position. Associations that fall into this category are subject to Special Assessments and deferred maintenance, which could lead to lower property values. If the association is in this position, actions should be taken to improve the financial strength of the Reserve Fund.

31% - 69% Funded – The majority of associations are considered to be in this "fair" financial position. While this doesn't represent financial strength and stability, the likelihood of Special Assessments and deferred maintenance is diminished. Effort should be taken to continue strengthening the financial position of the Reserve fund.

70% - 99% Funded – This indicates financial strength of a Reserve fund and every attempt to maintain this level should be a goal of the association.

100% Funded – This is the ideal amount of Reserve funding. This means that the association has the exact amount of funds in the Reserve account that should be at any given time.

Summary of 567 '< ca Yck bYfg'5 ggcWUhcb

Assoc. ID # - \$\$\$\$

Projected Starting Balance as of January 1, 2018 - Ideal Reserve Balance as of January 1, 2018 - S596,957

Percent Funded as of July 1, 2018 - 20%

Recommended Reserve Allocation (per month) - S4,000 (Starting in 2018)

Minimum Reserve Allocation (per month) - S12,000 (Starting in 2019)

Recommended Special Assessments - S0

Information to complete this Reserve Analysis was gathered during a property observation of the common area elements on September 19th, 2017. In addition, we obtained information by contacting local vendors and contractors, as well as communicating with the property representative. To the best of our knowledge, the conclusions and suggestions of this report are considered reliable and accurate insofar as the information obtained from these sources.

This property contains 82 units within 41 buildings that were constructed in several phases over a 11-year period. Common area amenities the association is responsible to maintain include building exterior surfaces, private driveways, roofs and gutters, an extensive irrigation system, perimeter fencing, and landscaping. Please refer to the *Projected Reserve Expenditures* table of the Financial Analysis section for a list of when other components are scheduled to be addressed.

In comparing the projected starting balance of \$120,752 versus the id \exists all f elever. Because of \$596,957, we find the association Reserve fund to be in a weak f in it is point in time (approximately 20% funded of ideal). As a result of the inition f is a contained in this report, we find the current budgeted Reserve allocation (\$4 ft is point in the current budgeted Reserve allocat

In the permit Funded graph, you will see we have also provided a "minimum Reserve contribution" of \$10,450 per month. If the Reserve contribution falls below this rate, then the Reserve fund will fall into a situation where additional Special Assessments, deferred maintenance, and lower property values are possible at some point in the future. The minimum Reserve allocation follows the "threshold" theory of Reserve funding where the "percent funded" status is not allowed to dip below 30% funded at any point during the thirty-year period.

This was provided for one purpose only, to show the association how small the difference is between the two scenarios and how it would not make financial sense to contribute less money (approximately 13% per month) to the Reserve fund to only stay above a certain threshold. As you can see, the difference between the two scenarios is considered to be extremely minimal, and based on the risk, we strongly suggest the recommended Reserve Allocation is followed.

Comp #: 105 Comp Shingle Roof - Replace (PH1)

Observations:

- This line item includes the buildings that were built in 2005 and 2006.
- The roofs on these buildings were in fair condition at the time of the site observation with some differential noted.
- It appears this roof material is rated as a 30 40 year product. Despite this rating, a life of a coy of 20 25 years is expected in this environment.
- Due to the potentially harsh winters, extensive freeze/thaw cycle, and likeli' or double events over the useful life of the roof, we typically see associations replacing roofs sooner than the result is suggested useful life.
- Remaining life is based on age of roof and observe conditions.

Stone/Rock Siding - Major Repairs 309 Comp #:

Observations:

- The stone siding on the buildings was in good condition at the time of the site observation.
- Typically, this siding has an extended life expectancy and complete replacement is inlikely
- There are times where some stones will loosen and fall off, but this is unpredictable when a night would occur.
- Repairs should be handled as a maintenance issue on an as needer basis.
- If it later turns out that frequent repairs are necessary, then funding could have drawn into the Reserve Study updates.

Comp #: 1701 Irrigation System - Major Repairs

Observations:

- It was reported that the irrigation system underwent many repairs this past year to fix issues due to pool installation.
- We typically see systems that are this age needing more frequent repairs.
- This line item is for repairs and replacement that lies outside the scope of routine maint in resolution sprinkler head replacement, bulk valve replacement, rerouting lateral lines, rewiring, 613.
- In order to ensure the funds are available for major repairs, we recon ment it serving rungs for these projects every 4 6 years.
- The funding on this line item is for major repairs and is not to be interpreted as complete irrigation system replacement.

Location: Throughout Property General Notes:

Comp #: 1706 Backflow Devices - Replace

Observations:

- Devices can be rebuilt and repaired when needed as a maintenance issue.
- It is very seldom that a complete system would need to be replaced due to normal wear and text
- Replacement would be as a result of freezing conditions if system is not winterized from rl crip a amely manner.
 No Reserve funding is required due to difficulty of predicting a life expectancy and the first hat systems can be rebuilt an a minimal cost, as opposed to being replaced.

Glossary of Commonly used Words and Phrases (provided by the National Reserve Study Standards of the Community Associations Institute)

Asset or Component – Individual line items in the Reserve Study, developed or updated in the Physical Analysis. These elements form the building blocks for the Reserve Study. Components typically are: 1) Association Responsibility, 2) with limited Useful Life expectancies, 3) have predictable Remaining Life expectancies, 4) above a minimum threshold cost, and 5) required by local codes.

Cash Flow Method – A method of developing a Reserve Funding Plan where contributions to the Reserve fund are designed to offset the variable annual expenditures from the Reserve fund. Different Reserve Funding Plans are tested against the anticipated schedule of Reserve expenses until the desired Funding Goal is achieved.

Component Inventory – The task of selecting and quantifying Reserve Components. This task can be accomplished through on-site visual observations, review of association design and organizational documents, a review of established association precedents, and discussion with appropriate association representatives.

Deficit – An actual (or projected) Reserve Balance, which is less than the Fully Funded Balance.

Effective Age – The difference between Useful Life and Remaining Useful Life. Not always equivalent to chronological age, since some components age irregularly. Used primarily is computations.

Financial Analysis – The portion of the Reserve Study where current strains of the Reserves (Measured as cash or Percent Funded) and a recommended of secretary unit ution rate (Reserve Funding Plan) are derived, and the projected Reserve and expense over time is presented. The Financial Analysis is the of the two parts of the Reserve Study.

Component Full Funding – W 15.1 ne ctual (or projected) cumulative Reserve balance for all components is equal to the Full (1/3/11) and Balance.

Fully und Ba' ar is (aka – Id al Balance) – An indicator against which Actual (or projected)
Reserve Balance can be compared. The Reserve balance that is in direct proportion to the fraction of the "used up" of the current Repair or Replacement cost. This number is calculated for each component, and then summed together for an association total.

FFB = Replacement Cost X Effective Age / Useful Life

Fund Status – The status of the Reserve Fund as compared to an established benchmark, such as percent funding.

Funding Goals – Independent of methodology utilized, the following represent the basic categories of Funding Plan Goals.

- **Baseline Funding:** Establishing a Reserve funding goal of keeping the Reserve Balance above zero.
- **Component Full Funding:** Setting a Reserve funding goal of attaining and maintaining cumulative Reserves at or near 100% funded.
- Threshold Funding: Establishing a Reserve funding goal of keeping the
 Reserve balance above a specified dollar or Percent Funded amount. Depending
 on the threshold, this may be more or less conservative than the "Component
 Fully Funding" method.

Funding Plan – An association's plan to provide income to a Reserve fund to offset anticipated expenditures from that fund.

Funding Principles -

- Sufficient Funds When Required
- Stable Contribution Rate over the Years
- Evenly Distributed Contributions over the Years
- Fiscally Responsible

Life and Valuation Estimates – The task of estimating Useful Life, Remaining Useful Life, and Repair or Replacement Costs for the Reserve components.

Percent Funded – The ratio, at a particular point of time (typically the beginning of the Fiscal Year), of the *actual* (or *projected*) Reserve Balance to the accrued *Fund Balance*, expressed as a percentage.

Physical Analysis – The portion of the Reserve Study where the Component Inventory, Condition Assessment, and Life and Valuation Estimate tasks are performed. This represents one of the two parts of the Reserve Study.

Remaining Useful Life (RUL) – Also referred to as "Remaining Life" (RL). The estimated time, in years, that a reserve component can be expected to *continue* to serve its intended function. Projects anticipated to occur in the initial year have "0" Remaining User Lil Life

Replacement Cost – The cost of replacing, repairing. (restoring a les replacement to its original functional condition. The Current Replacement Cost in all he lie c st to replace, repair, or restore the component during that particular year

Reserve Balance – Actual or projected unds as of a particular point in time (typically the beginning of the fiscal year) that it is as position has identified for use to defray the future repair or replacement of those as projections in which the association is obligated to maintain. Also known asserves, fixer at accounts, Cash Reserves. This is based upon information provided and is not audited.

Reserve Sudies. Also known as **Aspen** Reserve Specialties.

Reserve Study – A budget-planning tool that identifies the current status of the Reserve fund and a stable and equitable Funding Plan to offset the anticipated future major common area expenditures. The Reserve Study consists of two parts: The Physical Analysis and the Financial Analysis.

Special Assessment – An assessment levied on the members of an association in addition to regular assessments. Special Assessments are often regulated by governing documents or local statutes.

Surplus – An actual (or projected) Reserve Balance that is greater that the Fully Funded Balance.

Useful Life (UL) – Also known as "Life Expectancy", or "Depreciable Life". The estimated time, in years, that a Reserve component can be expected to serve its intended function if properly constructed and maintained in its present application or installation.
